

EYFS/Year 1 Science Knowledge Organiser: Water

Vocabulary	Definition
material	what something is made from
float	rest on and stay above the surface of a liquid
sink	goes below the surface of a liquid
dissolve	when a material mixes with a liquid and disappears
temperature	how hot or cold it is
freeze (frozen)	when a liquid becomes solid because of low temperatures
melt	a solid made into a liquid by heating
absorbent	able to soak up a liquid
solid	stays the same shape
liquid	takes the shape of its container and can be poured
gas	not a solid or a liquid – it is like air
evaporate	when a liquid changes into a gas because it has been heated

SOLID

LIQUID

GAS

The water has frozen because the weather temperature is cold and it has turned into ice.

The ice cream is melting because the weather temperature is hot.

The puddles are evaporating because the weather temperature is hot.
